Comment to FCC

April 9, 2025

As citizens who are EMF sensitive (we both are)- the FCC's inaction concerning smart meters, cell towers, etc. has made it impossible for us to reduce our EMF exposures- we are surrounded by EMF's. We were plaintiffs against our local electricity company last summer, because we did not want our analog meter replaced by a smart meter on our home. After 3 months of having our electricity shut off (our hottest summer on record) because we refused to accept a smart meter- we lost the lawsuit & we then had to agree to having a smart meter put on our home. This smart meter on our personal dwelling has diminished our quality of life & affects our health on a daily basis. As citizens, we should have a right to refuse a smart meter. We should have been allowed to keep our analog meter- which was working fine. Smart meters have also caused house fires- & our homeowners insurance plan is unclear whether we would be covered if we have a fire caused by the smart meter. There are many reasons smart meters & cell towers are detrimental to humans & all life on earth!
